

# ABSTRACT OF THE DISCLOSURE

The invention relates to the use of RFID systems for use with items of interest having RFID tags, such as in a library. The invention has particular applicability to determining the location, order, and other information regarding such items.

1. A method for determining the location of an item in a library, comprising: receiving a signal from an RFID tag attached to the item; and determining the location of the item based on the signal.

2. The method of claim 1, wherein the signal is a radio frequency signal.

3. The method of claim 1, wherein the signal is a signal that is received from a reader.

4. The method of claim 1, wherein the signal is a signal that is received from a tag.

5. The method of claim 1, wherein the signal is a signal that is received from a tag that is attached to the item.

6. The method of claim 1, wherein the signal is a signal that is received from a tag that is attached to the item and that is used to determine the location of the item.

7. The method of claim 1, wherein the signal is a signal that is received from a tag that is attached to the item and that is used to determine the location of the item and the order of the item.

8. The method of claim 1, wherein the signal is a signal that is received from a tag that is attached to the item and that is used to determine the location of the item and the order of the item and the other information regarding the item.

9. The method of claim 1, wherein the signal is a signal that is received from a tag that is attached to the item and that is used to determine the location of the item and the order of the item and the other information regarding the item and the location of the item.

10. The method of claim 1, wherein the signal is a signal that is received from a tag that is attached to the item and that is used to determine the location of the item and the order of the item and the other information regarding the item and the location of the item and the order of the item.
